Project Code: TLSU0005_w5
Project Name: Multi-Wave LA Covid Tracker Wave 5
Prepared for: Michael Henderson, Louisiana State University
Interviews: 1000
Field Period: April 20, 2021 – May 10, 2021
Project Manager: Ashley Grosse – 650.714.0751
=====

YouGov interviewed 1244 respondents who were then matched down to a sample of 1000 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frame was constructed by stratified sampling from LA residents in the 2018 American Community Survey (ACS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 and 2020 Presidential vote choice, and a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.

335	1	Show 236a – The Covid-19 pandemic has given humanity a harsh wakeup call about the lethal impact of infectious disease. Scientists are already wondering: Can we avoid the next one? Life in the 21st century, with its urbanization, overpopulation and international trade and travel, has created the ideal conditions for new diseases to quickly multiply and spread. The next pandemic could be similar to Covid-19, a zoonotic virus that has spread from contaminated animals to humans. We are creating and exacerbating conditions that could lead to more pandemics in the very near future. For example, as deforestation brings contaminated animals into closer contact with humans, scientists and doctors worry that an even more dangerous pandemic could be just around the corner.
328	2	Show 236b – We may be on the verge of the next big economic crisis. Economic downturns historically come about once every decade, and it has been more than that since the 2008 financial crisis. In the very near future, we will likely face a global debt crisis that could dwarf what the world experienced in 2008-2009. Burdensome debts endanger both the United States and the global economy. Even now, unemployment numbers remain high and economists worry about skyrocketing inflation. People owe more money now than ever before—including household, auto, student loans, as well as credit card debt. This debt has surged since 2008, meaning the next financial crisis could hit sooner rather than later.
337	3	Show 236c – Every year, smart glasses hint to become the next big thing in tech. The promise of smart glasses is an alluring prospect. Imagine seeing and doing everything on your glasses that you would normally see and do on your phone. And a lot more. For instance, imagine following directions on your glasses as you text friends your location. Smart glasses, like the already popular smartwatches, are designed to make technology more accessible for people’s day-to-day lives. Some tech companies have been selling smart glasses since 2011, but the gadget has yet to take off. Facebook, the creators of Pokemon Go, and Google

are all playing with their own version of the wearable gadget. Smart glasses may hit shelves sooner than we think.
